Sheth L.U.J and Sir M.V college
Python strings
Practical no.:

Aim: studying the strings in python.

1) Creating multiline string:

```
a = """Python is a programming language,
it uses various datatypes,
various fuctions are there in python,
string and arrays are the part of python"""
print(a)
```

```
Python is a programming language,
it uses various datatypes,
various fuctions are there in python,
string and arrays are the part of python
```

```
a = '''Python is a programming language,
it uses various datatypes,
various fuctions are there in python,
string and arrays are the part of python'''
print(a)
```

```
Python is a programming language,
it uses various datatypes,
various fuctions are there in python,
string and arrays are the part of python
```

```
a = "hello world this is Tasmiya"
print(len(a))
```

```
27
```

Tasmiya Jahagirdar,
F087.

Sheth L.U.J and Sir M.V college
Python strings
Practical no.:

```
a = "python is a programming language"
print("world" in a)
```

```
False
```

```
py = "python is programming language"
if 'language' in py:
  print("yes, 'language' is present")
```

```
txt = "python is a programming language"
print('expensive' not in txt)
```

```
True
```

2) Slicing:

```
s = "programming language"
print(s[-12:-5])
```

```
ing lan
```

3) Modifying slicing:

```
s = "python is a programming language"
print(s.upper())
```

```
PYTHON IS A PROGRAMMING LANGUAGE
```

```
s = "PYTHON is A PROGRAMMING language"
print(s.lower())
```

```
python is a programming language
```

Tasmiya Jahagirdar,
F087.

Sheth L.U.J and Sir M.V college
Python strings
Practical no.:

```
a = "python program"
print(a.strip())
```

```
python program
```

```
s = "python programming language"
print(s.replace("l","K"))
```

```
python programming Kanguage
```

```
q = "python programming language"
print(q.split("r"))
```

```
['python p', 'og', 'amming language']
```

4) Concatenate strings:

```
a = "Tasmiya"
b = "Jahagiradr"
c = a+" "+b
print(c)
```

```
Tasmiya Jahagiradr
```

5) Format strings:

```
py = "python"
txt = f"The {py} is a programming language"
print(txt)
```

```
The python is a programming language
```

Tasmiya Jahagirdar,
F087.

Sheth L.U.J and Sir M.V college
Python strings
Practical no.:

```
price = 70
txt = f"The price is {price:.2f} dollars"
print(txt)
```

```
The price is 70.00 dollars
```

6) Escape characters:

```
txt = " I am  \"Tasmiya\" from the India."
print(txt)
```

```
 I am  "Tasmiya" from the India.
```

Tasmiya Jahagirdar,
F087.
